SUBJECT: SADD Waste Oil Data

FROM: Greg Powell, OSC EPA Region IV

To: Greg McCartney, OHM-Findlay, Ohio

I have enclosed portions of the SADD Waste Oil report that was prepared by the EPA ERT. The consideration for the use of the OHM soil volatilizer seems to be a possibility. I would like to mix the wastes that are in the tanks in with the excavated soils. Stockpiling of soils would be the first step in the process before ultimate disposal. It is the general consensus among some of the staff at EPA that much higher VOC concentrations will be found in the soils once excavation begins. Take a look at what I have sent you and give me a ballpark idea of whether the volatilizer can be used and what a cost be ton would be for incineration. The incineration costs should include all handling of materials after they are excavated, unit costs, personnel, etc..
